

PRIVILEGED REMOTE ACCESS

Self-service registration, secure remote access, complete monitoring, and policy enforcement for advanced privileged vendor access.

BENEFITS

FINE-GRAINED ACCESS CONTROLS

Give vendors and third-party users specific access, not a VPN

SELF-SERVICE

Streamline and enable self-service for vendor user registration, account claiming, and access, all controlled by your security policy and enforcement

REDUCED RISK

Remove the risk of relying on business partners and vendor cyber security program maturity

STREAMLINED COMPLIANCE

Simplify compliance with PCI, HIPAA, HITECH, and others

THE RISK FROM OUTSIDE

Your cyber security is only as good as that of your vendors.

In fact, 65% of breaches can be traced back to a third party.

If you're like most organizations today, you frequently grant vendors, contractors, and other non-staff members access to internal networks and systems. These privileged users remotely administer your operating systems, databases, or applications using their own endpoint devices. The problem is, your security team may know little to nothing about these individuals or their corporate security practices. These users may be poorly vetted, third parties may have loose security policies, and credentials may not be well protected. For these reasons, privileged third-party accounts often present the biggest risk to your enterprise.

To reap the benefits of technical partnerships and leverage expertise of vendor staff, sensitive information must be exchanged, and access provided. However, onboarding and managing transient third-party users, restricting and monitoring privileged account access and properly governing and enforcing security best practices isn't easy when the activities of the user occur outside the direct control of your information security team.

PRIVILEGED REMOTE ACCESS SOLUTION

Focal Point has developed a unique Privileged Remote Access (PRA) solution that leverages best-of-breed technology to deliver a unified, policy-driven approach to managing vendor identities and privileged access. Our solution leverages leading technologies, including:

SOLUTIONS

INTEGRATED PAM, IDENTITY GOVERNANCE, AND REMOTE ACCESS

With Focal Point's Vendor Privileged Remote Access (PRA) solution, organizations can now gain enhanced visibility, security, and control of third-party privileged account access. With this best-of-breed integration, organizations can improve administrative efficiency through self-service registration, attain a comprehensive view of access and its associated privileged users, and establish consistent, automated governance controls to enforce third-party access policies and monitor sensitive system activity across the entire network.

SOLUTION OVERVIEW

User Registration & Account Claiming.

Focal Point UI, externally facing, leveraging SailPoint APIs

Workflow Approval and Account Provisioning.

SailPoint IIQ, Lifecycle Manager

Access Control & SSO.

Ping Federate, PingID (MFA)

Network & System Access.

CyberArk Enterprise Password Vault (EPV) & Password Vault Web Access (PVWA)

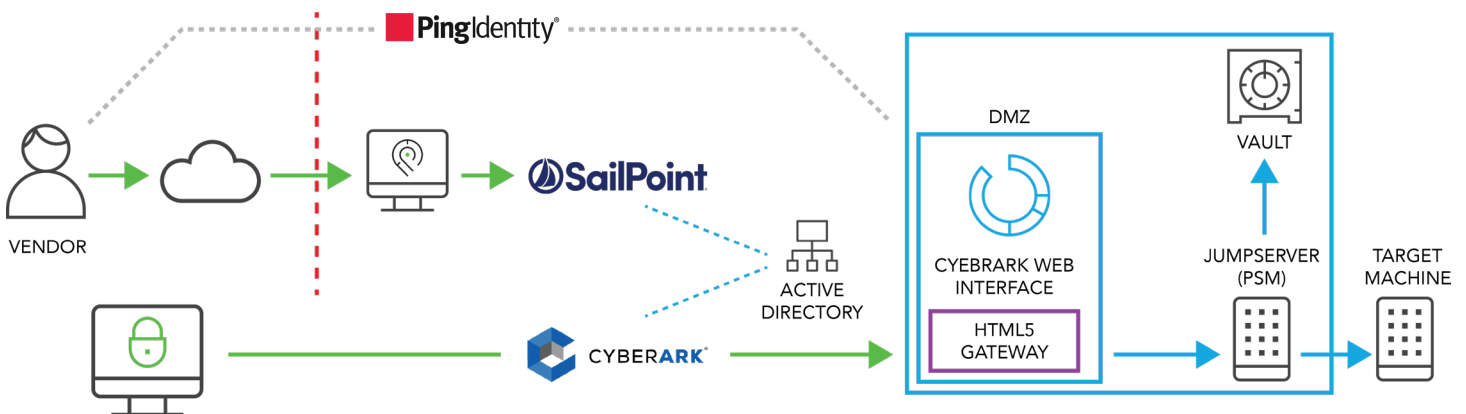

Monitoring, Recording and Auditing.

CyberArk Privileged Session Management (PSM) & Privileged Threat Analytics (PTA)

Governance & Compliance.
